# Executive Overview

We are pleased to present FirstTech Training, Inc. with a phase II proposal of the database design and administration project. The new DBMS will free up your time, allowing you to focus on more important aspects of your growing company. Our system will streamline your data management, therefore, minimal updates are required and all information regarding Trainers, Clients, Classes, Classrooms, Books, Vendors, and Programs will be integrated to provide FirstTech Training a meaningful resource to help the company grow to its potential.

Trainers are a very integral part of the system, they teach the clients and ultimately determine what classes can currently be offered based on their qualifications. By keeping track of this information, FTI can better determine which trainers are available to teach certain classes or what classes they are currently teaching. In addition, the system can also help determine which trainers are best suited to teach what classes based on each trainer's teaching history. Another outcome would be to examine what trainers had the most favorable impact on the clients which might lead to recruiting more potential clients by word of mouth (explained in more detail on page 21 with the use of a View). It could lead to developing ways of retaining current devoted trainers, those who are continually increasing their qualifications could be rewarded which may help with retention amongst the faculty. By utilizing the information of the company's employees, it will be easier to increase the effectiveness of the business.

A business would have a hard time expanding without clients. By putting clients' information into a reliable system, it would be easier for the company and the customers to make successful transactions. Within the system, it will not be hard to find out what classes the customers are taking, who are on the waiting list for what class, or what type of membership the client currently has. In addition, the system will help employees to enroll clients in classes when determining their eligibility for classes based on the pre-requisites information of the database. Based off the waiting list, employees can determine what classes need to be added or expanded upon to meet the demand of the clientele. By having the clients' information organized, it also offers an efficient way to follow up with alumni with surveys or contact those who may be interested in an advanced course to one that they have already completed (explained in more detail on page 26 with the use of a Report). These are several ways how keeping track of the clients' information will be beneficial in building an effective database to help further grow the business.

Another added benefit of the system is to help with course materials. This information is beneficial in making sure that every course and every class has all the ancillaries that are necessary. It is important that there are enough textbooks for every student enrolled in specific classes and enough program licenses for the classes that will need them. By keeping track of all book orders, it will also make it easier to identify the quality of vendors, particularly those who could offer discounts and guarantee delivery in a timely manner (more details on page 23 with the use of a Report). The system will also keep track of the

current status of book orders that the business has placed so that it can keep track of its current inventory to always be prepared and available for clients.

The Conceptual Data Model (Entity-Relationship Diagram), Logical Data Model (Normalized Relational Schema), and the Physical Data Model (Data Dictionary) were all tools in mapping how the system should operate according to your business processes. The Entity Relationship Diagram shows the data structure and design for all major business entities. It helps give a visual representation of how all the data in FTI connects with each other. For example, the class fee is determined by the membership discount and the base course fee. The Physical Data Model will set the parameters on how the information is updated and functions. It also allows us to create constraints for the data to make sure you are recording what you need. This is to prevent possible manmade errors like giving a client a membership code that does not exist or providing too many or too few digits for a phone number. The Data Dictionary also allows the creation of indexes so that student can be found by their name or phone number if they cannot remember their student ID. All of these documents are attached.

Other benefits of this sytem include creation more productivity for your employees. Entering the same data multiple times is no longer needed: by having a client's name in one table of the database, the information is connected directly to another table instead of having employees typing every client name manually. The system will also calculate the avaiability of each class for you by taking the information of the capacity of each room and the current clients enrolled in the class. To understand the full usefulness of the system, please read the accompanying Documentation of the database prototype which will serve as an instruction manual to perform all the functions that our system is designed to do for FTI. Our team's mission is committed to the success of your company and we look forward to hearing from you soon.

# Accessing the Database

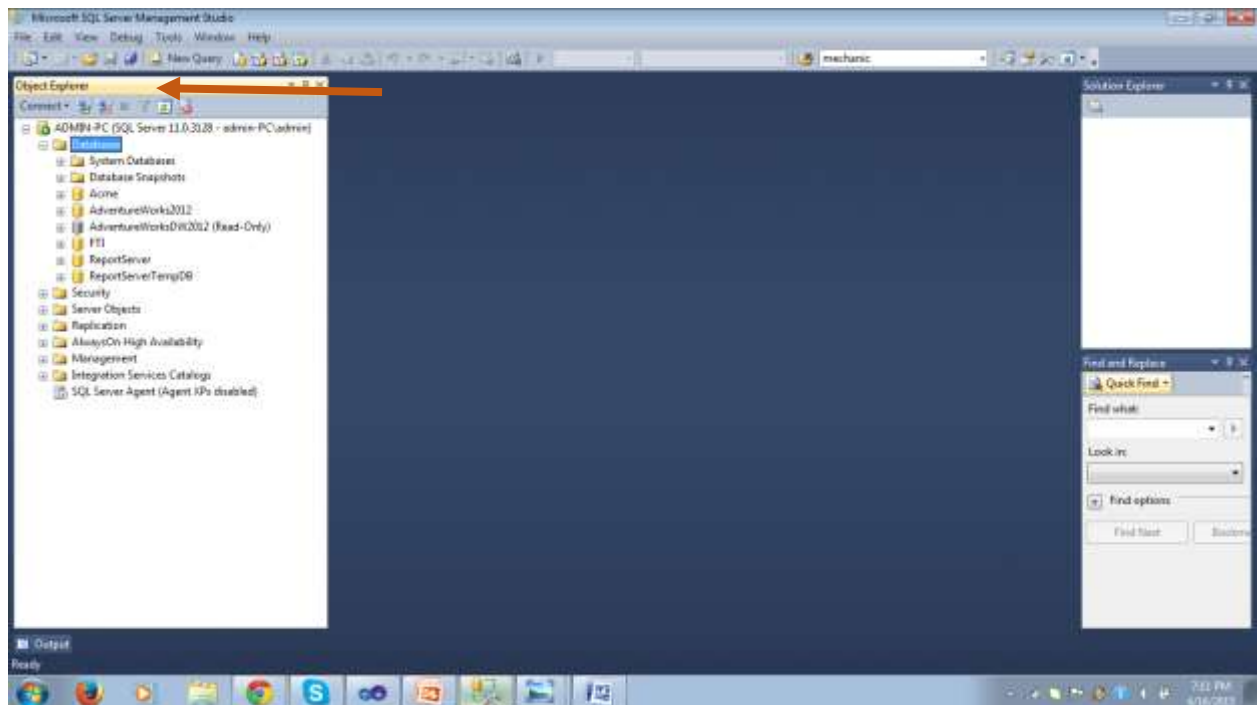

1. To access the database, click “Start Menu” , then go through the following option and double click on “SQL Server Management Studio”.

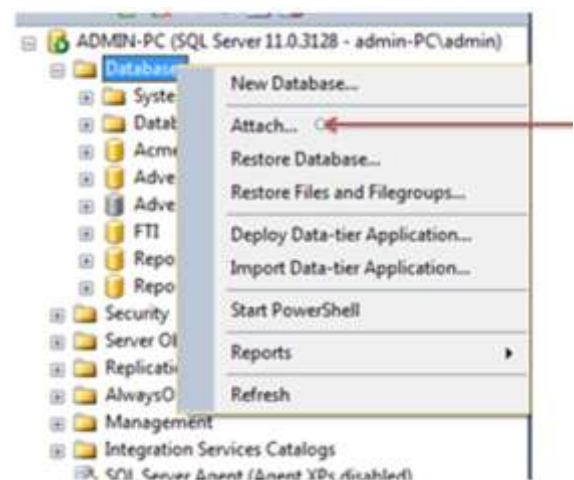

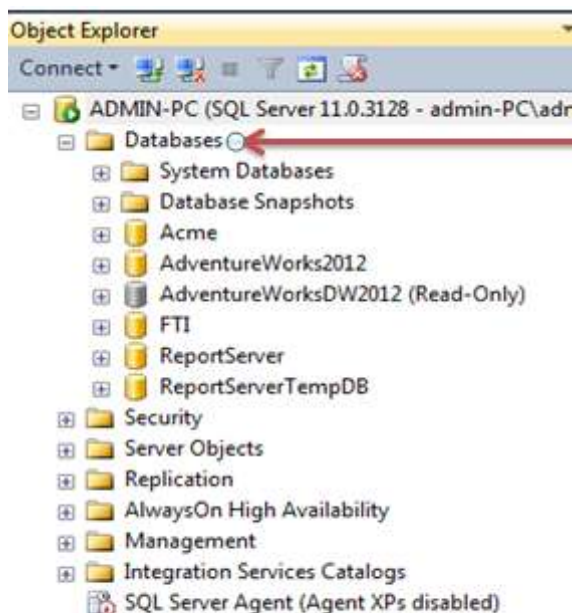

2. It is important to make sure that the “server name” matches your server from your computer or laptop, and then click “Connect”.

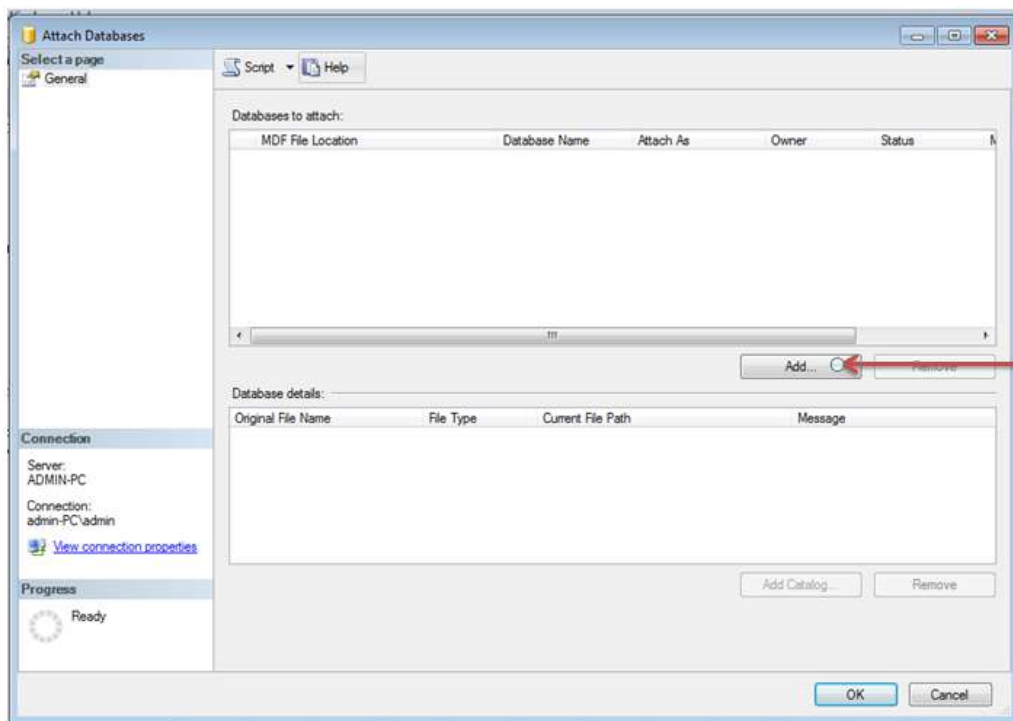

3. When the software opens completely, you need to find “Object Explorer”.

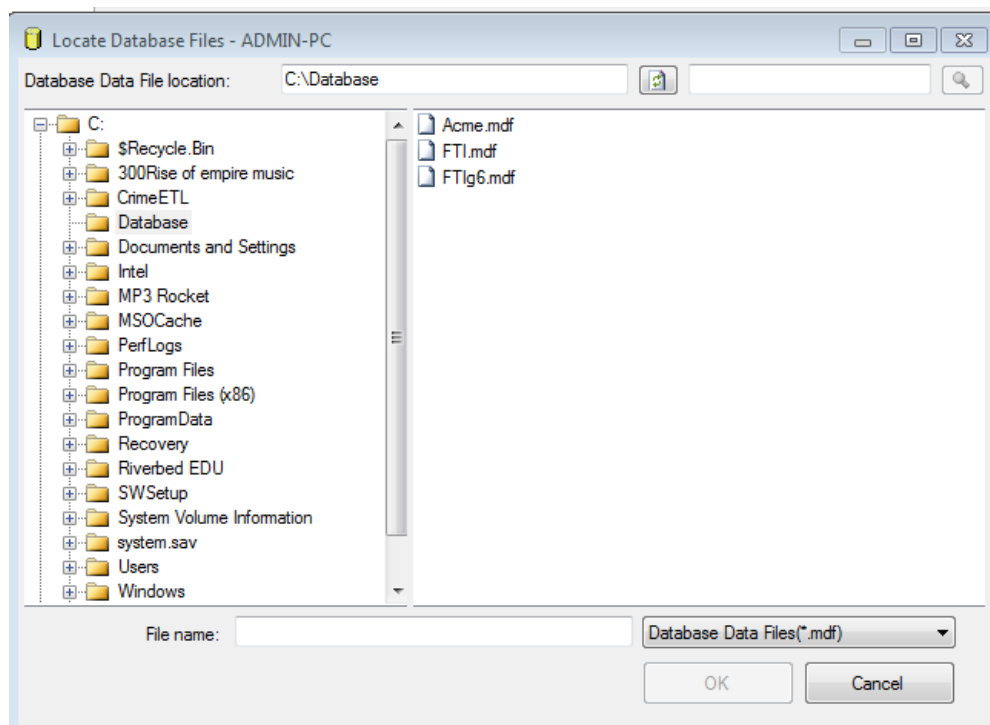

4. In Object Explorer, You can attach the database by right clicking “Database”. When the submenu appears, you must select “Attach” to link the database we have created for you.

5. The screen “Attach Databases” will appear, then click “Add” to select the location where you save the new Database.

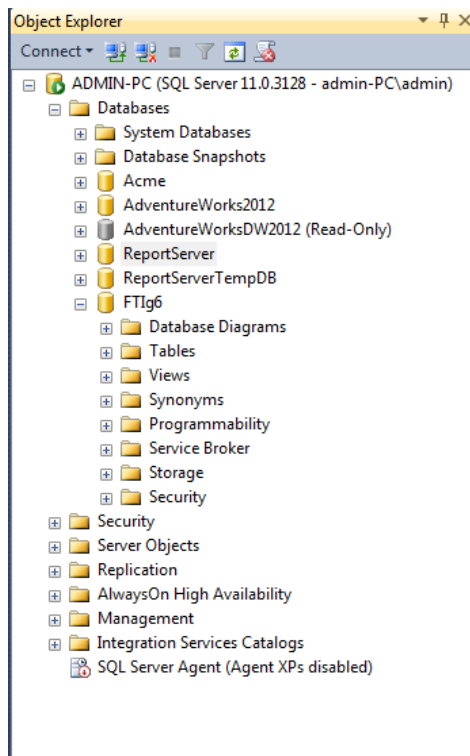

6. Choose the folder where the new Database is saved, and then select your new Database FTIg6.mdf. Finally, you make click in “OK” and the database will be completely attached to your server.

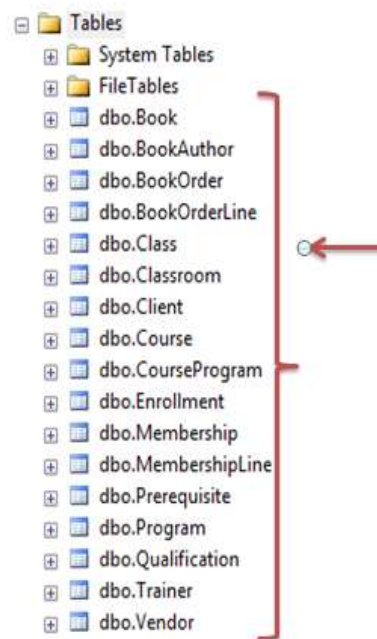

# Viewing Data

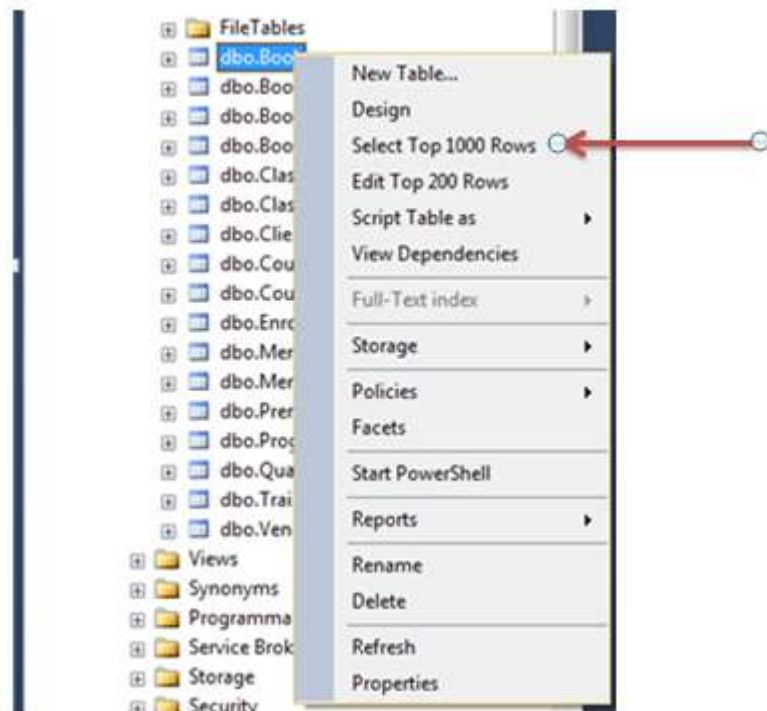

1. To view the data from the database tables, select FTIg6 (your new database), and then expand the “Tables” folder by double clicking or by clicking the + sign to the left side of the folder. (In case the new database is not visible, right click on “Databases” and click on Refresh).

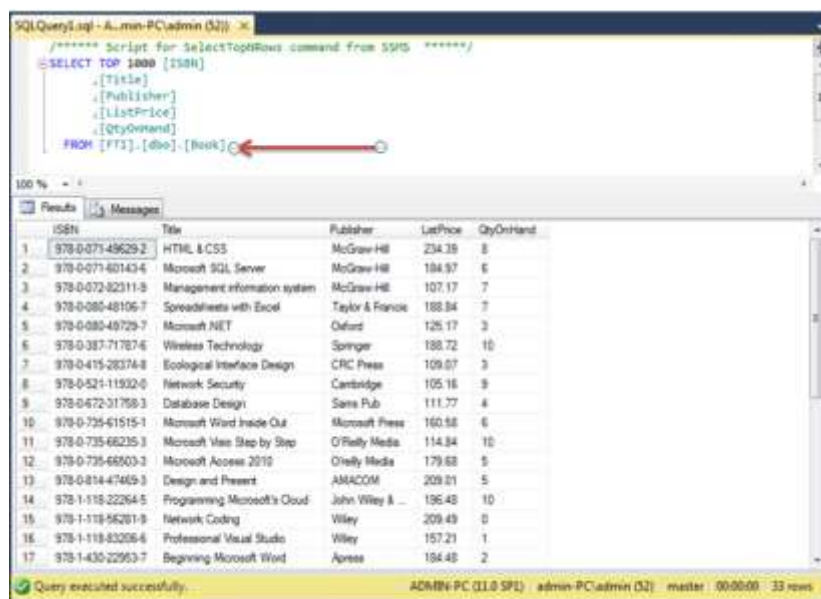

2. When you open the Tables folder, you will see all the data that FTI currently has, organized into different tables.

- To view the data of any desired table, select the table, and make a right click and then click on “Select Top 1000 Rows”.

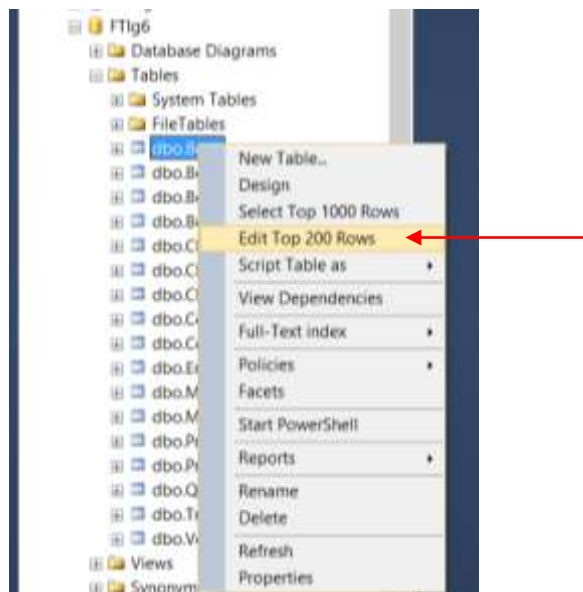

- All the information of the table will appear, however, you will not able to edit any information from this window.

# Editing Data

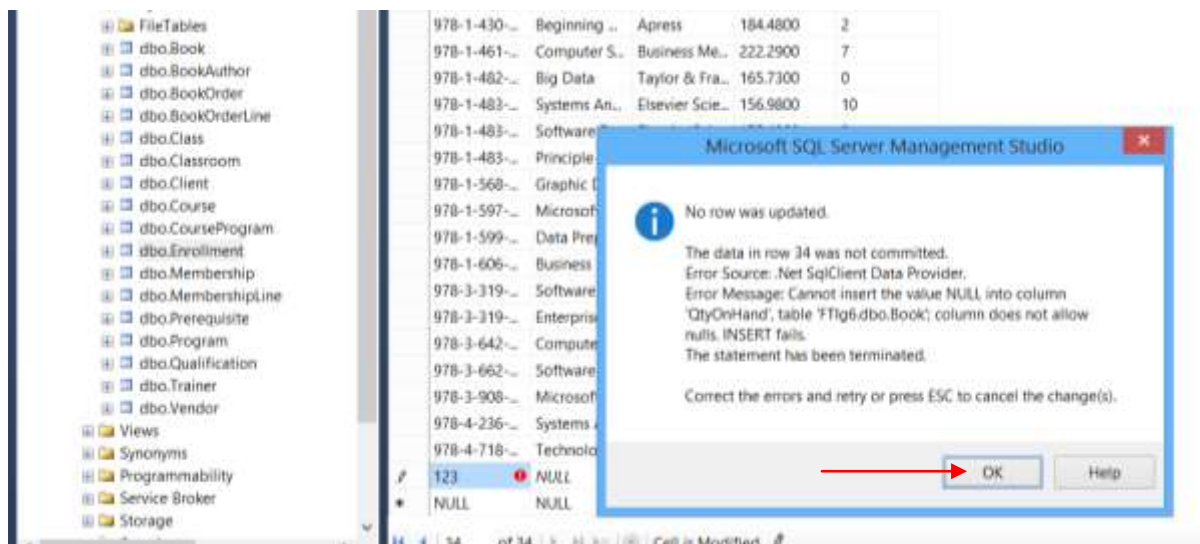

1. To edit (insert, update, delete) the information of any desired table, right click on the table and select “Edit Top 200 Rows”.

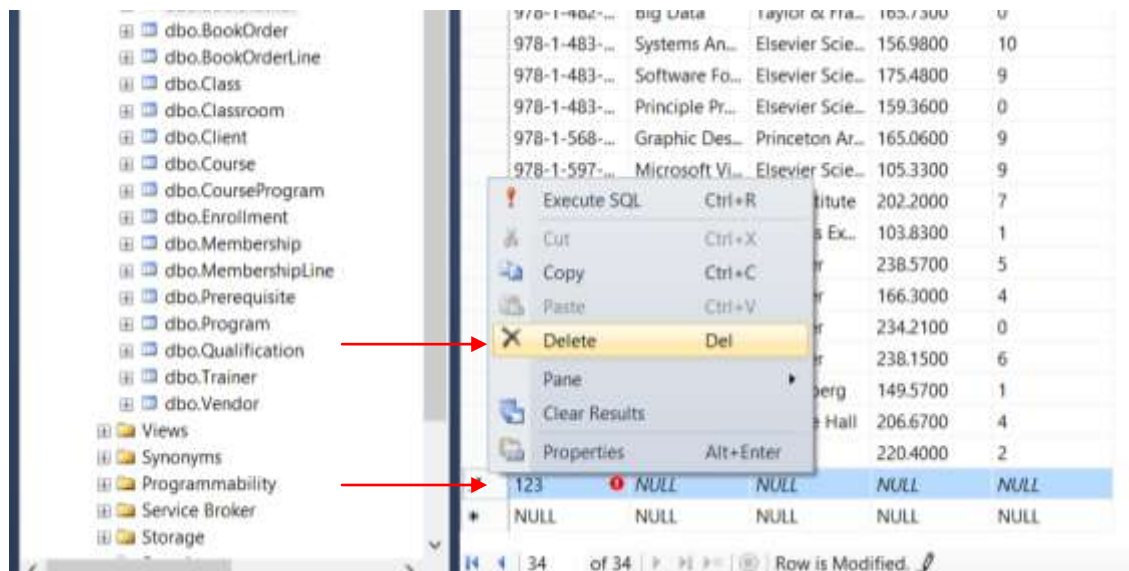

2. The following window will appear and to insert a new row, simply scroll down until the very where you will see the row that says “NULL”. Click on “NULL” and type your own data. Use tab to move to the next column or you can also click on the next column cell to insert data. Hit enter after you have entered all the data for the new row.

- If the data entered is not complete or is not entered in the correct format, the following error message will appear reminding you of the incorrect data input. Click OK and make sure that your data is entered correctly.

- To delete a row of data, right click on the left empty space located to the left of the row no longer desired and click on "Delete".

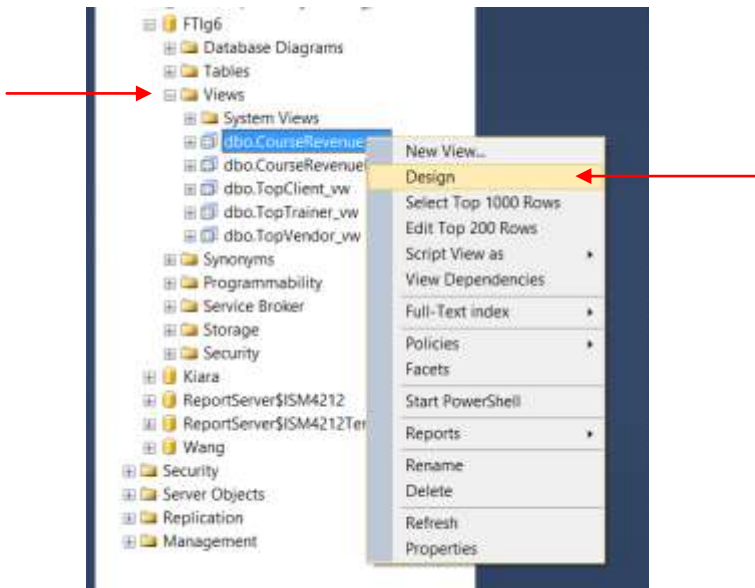

- To modify the information of a cell in a row, simply click on the cell you wish to modify, type in the new information and hit enter.

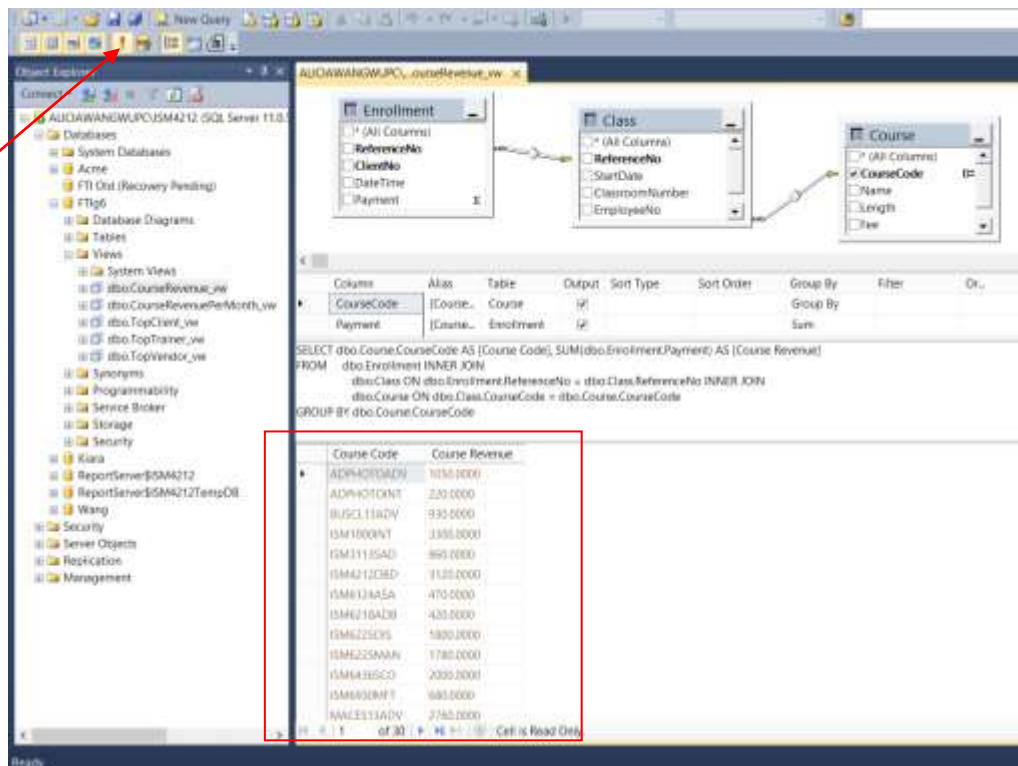

# Accessing Views

1. To access the desired view in the format we recommend, double click on the Views folder. Right click the view you wish to see and click on “Design”.

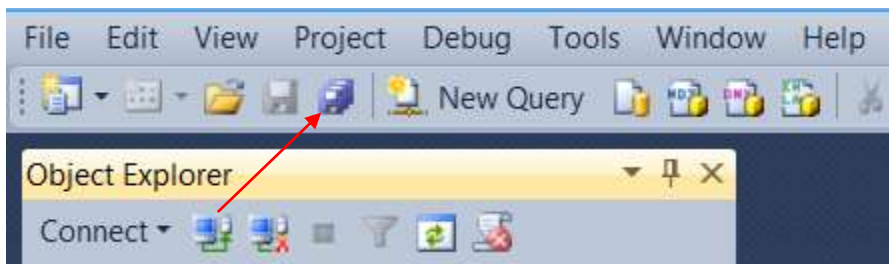

2. The following window will appear and click on the red exclamation mark located towards the upper left corner (below the save button) to be able to see the view as shown below.

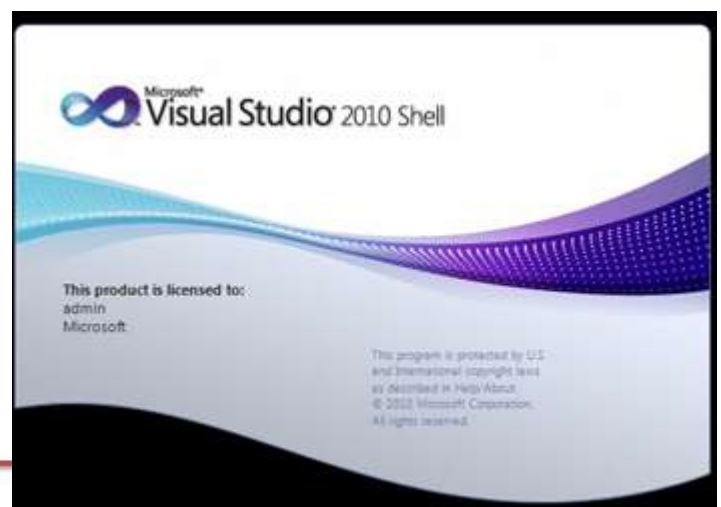

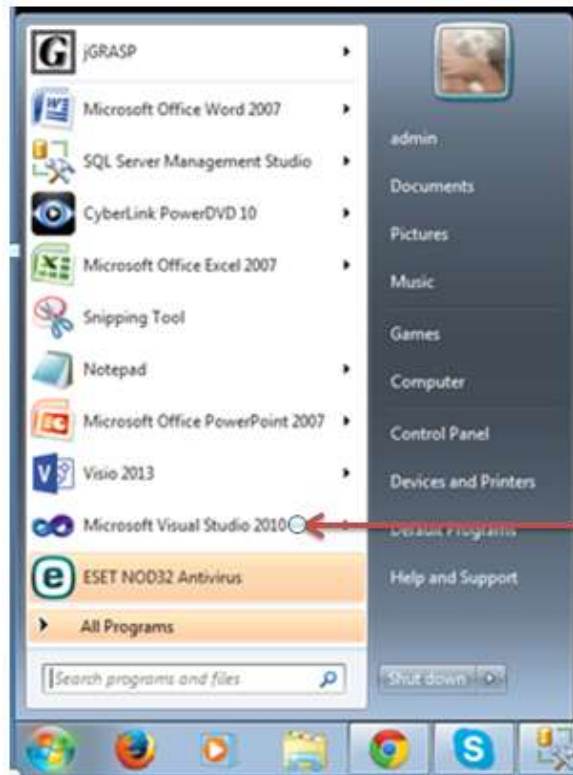

## Closing SQL

1. Once you are finished with viewing or updating your information, make sure you save all your work before exiting by clicking on the “Save All” button located towards the left top corner.

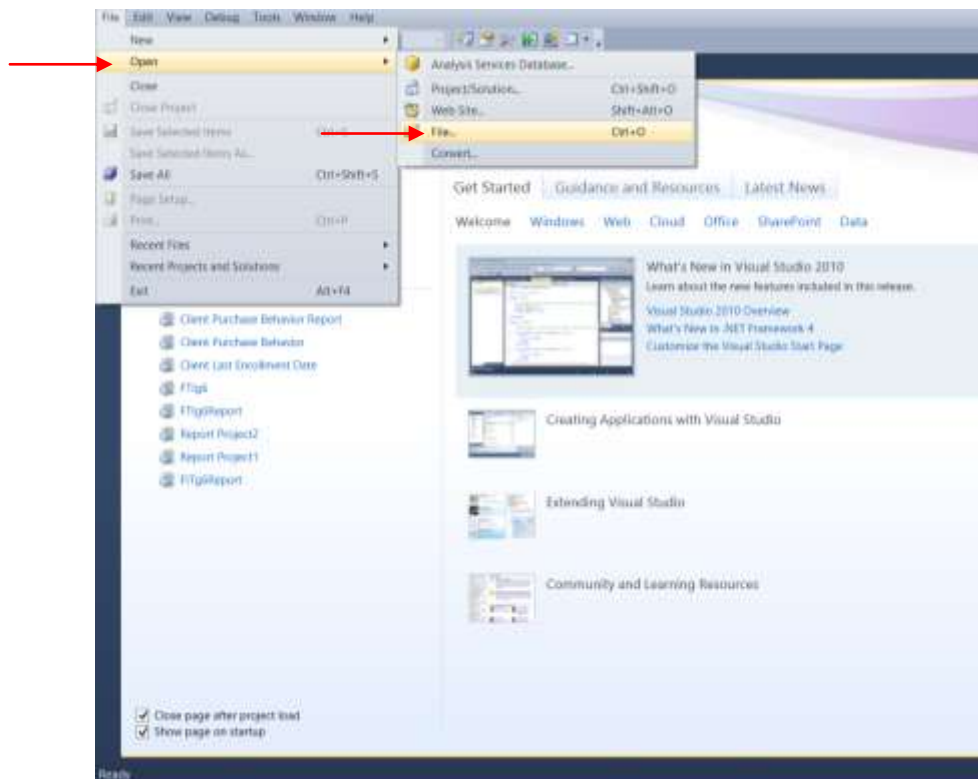

## Viewing Reports

1. To view and print the report, open the software. You will select “Windows Menu” and then click on “Microsoft Visual Studio”.

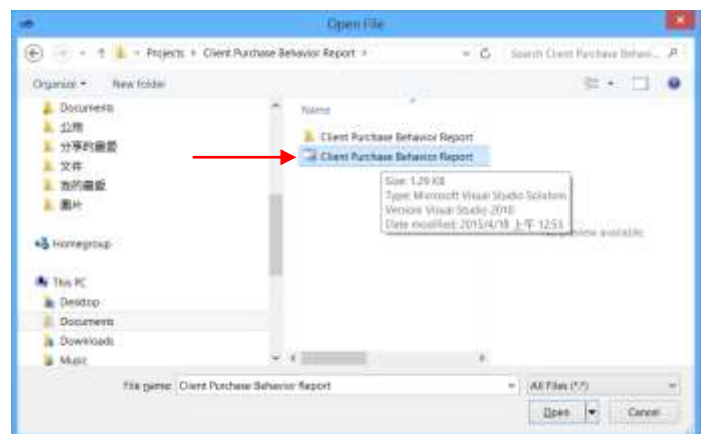

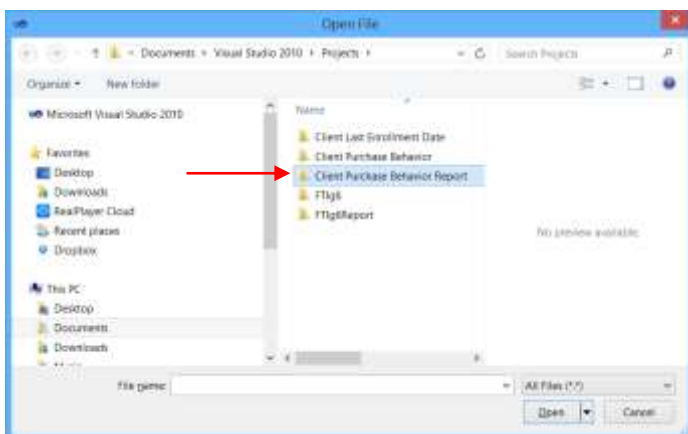

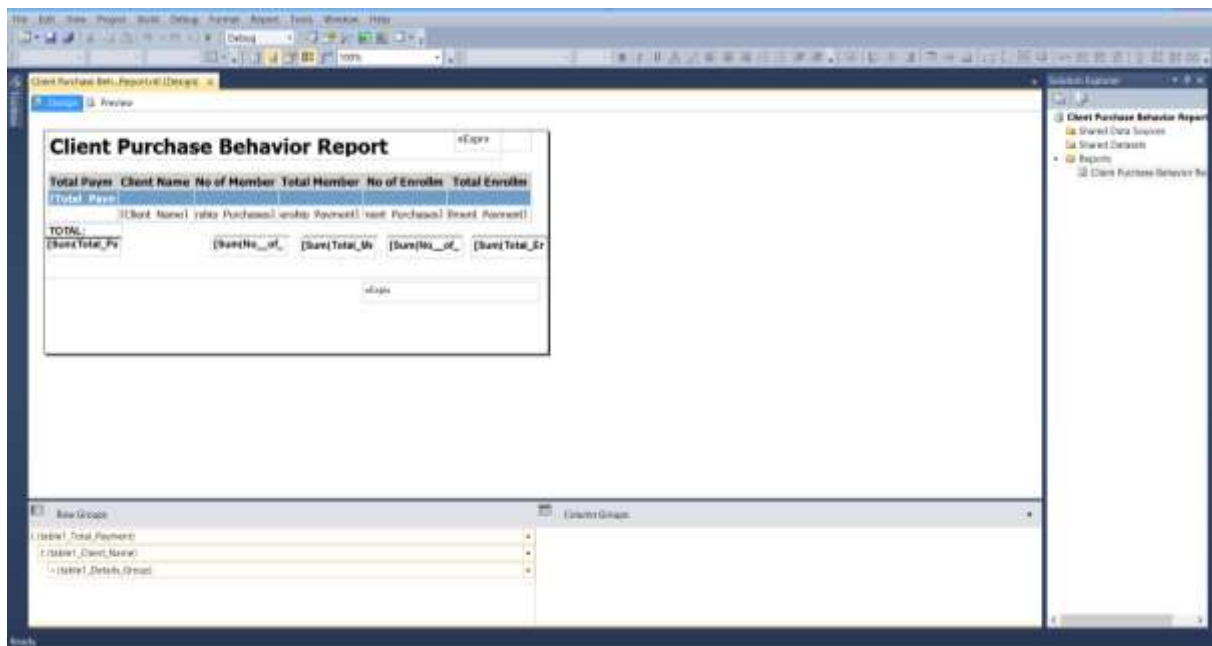

2. The following window will appear and then click on the File menu, Open and “File...”

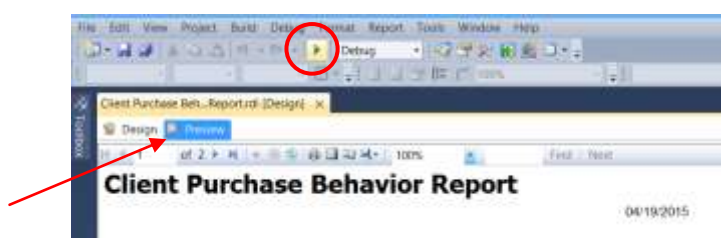

3. A pop up window will appear. Choose where the desired report folder is located and then double click on the report file in the visual studio format.

- The design view of the report will appear. You can adjust the width of columns or change the desired font or color of the text.

- To view the report and print, click on “Preview” button right next to the “Design button” and then click on Debug so that the results are extracted directly from database. A new window will appear showing the updated results. The current date should appear as well as the page numbers.

# View Description

## Course Revenue View

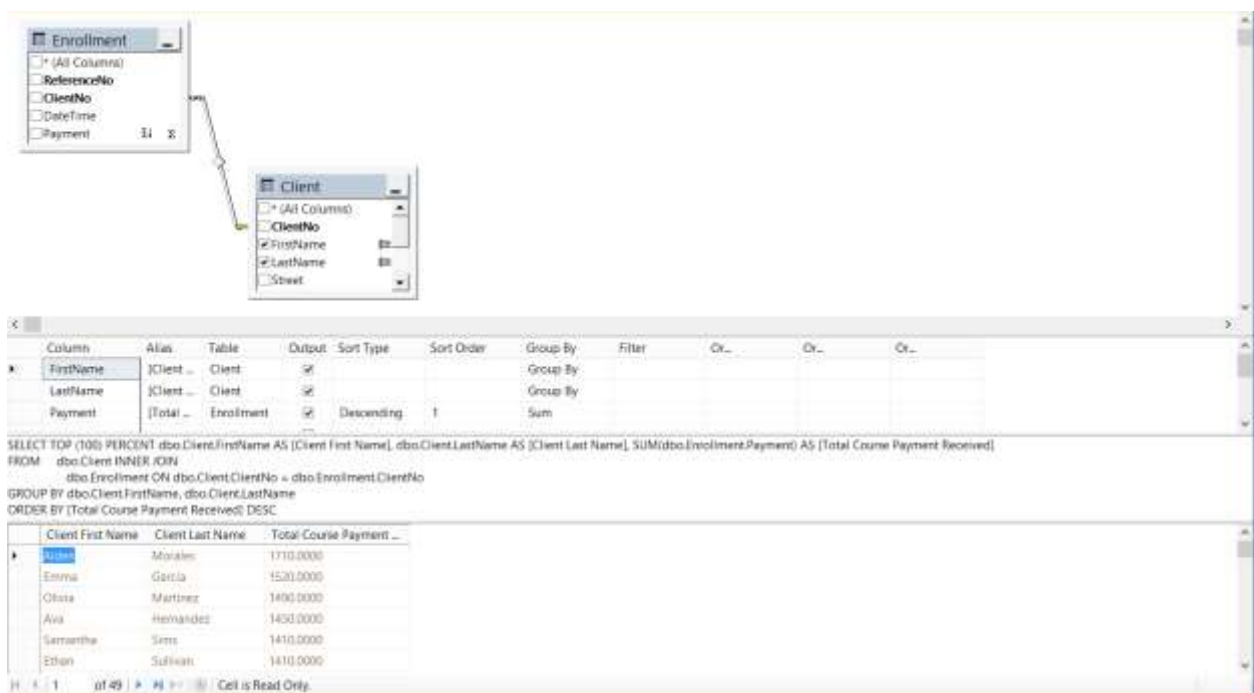

FTI currently has over 30 courses and although FTI will only keep growing and expanding from now, it is still recommended that FTI choose to continue opening courses that were successful, and suspend, modify or close courses that were not as successful. This view shows the revenue paid by all the enrolled clients from each course since the launch of FTI. The information from this view is particularly useful in the assessment of the effectiveness and worthiness of the courses in terms of revenue. For the courses (shown as Course Code) that had the least revenue, it implies that not many students were enrolled and it is possible that the revenue from the course alone will not be enough to cover costs of books or softwares. In this case, FTI will be better off opening another course that has been successful (shown in this view) and increase the chances of attracting more revenue. There are many variables (such as course fee, trainer quality) that can affect the success and failure of each course. Although this view does not show the variable that can explain the differences of course revenue, it definitely shows which courses are in good standing and which courses needs change as well as improvements. The view is sorted by Course Code for your convenience in case you wish to see other course information from the Course Table (Course Name, Fee, Book Used, etc) that will also be sorted by Course Code.

Course Code	Course Revenue
ADPHOTOADV	1050.0000
ADPHOTOINT	220.0000
BUSCLT13ADV	930.0000
ISM1000INT	3300.0000
ISM3113FAD	860.0000
ISMA212DBD	3120.0000
ISM6124ASA	470.0000
ISM6218ADB	420.0000
ISM6225DES	1800.0000
ISM6229MAN	1780.0000
ISM6436SCO	2000.0000
ISW910MFT	680.0000
MACE513ADV	2760.0000

## Top Client View

This view shows the Course revenue made from each client since the company started. From the view you can see which client has spent the most amount of money with FTI for their class enrollments. The view is sorted by “Total Course Payment”, from clients who have spent the most to the clients who have spent the least for class enrollments. With this information it can lead the company to discover possibly what common trait that the top spenders have with the company. However, some more information would be required to finding out why our top clients choose to spend their money with the company. Using this view, you can easily see who the top spenders are and find out more about them or even send questionnaires to find out why choose FTI or send them incentives to help reffer more customers. Another way to look at it is applying the same techniques to the bottom of the list to find out more about the clients who have spent the least on class enrollments. While this does not give us the story behind each individual and history with the company, by identifying the client’s first name and last name, you could investigate further, see if there is a trend amongst the the clientele (were they taking the same courses, who were the trainers that taught them, etc) and make improvements in order to retain current clients and attract new clients.

The screenshot displays a SQL Server Enterprise Manager interface. At the top, there are two database tables: 'Enrollment' and 'Client'. The 'Enrollment' table has columns: ReferenceNo, ClientNo, DateTime, and Payment. The 'Client' table has columns: ClientNo, FirstName, LastName, and Street. Below the tables, a query window is open, showing a SQL query and its results.

**Query:**

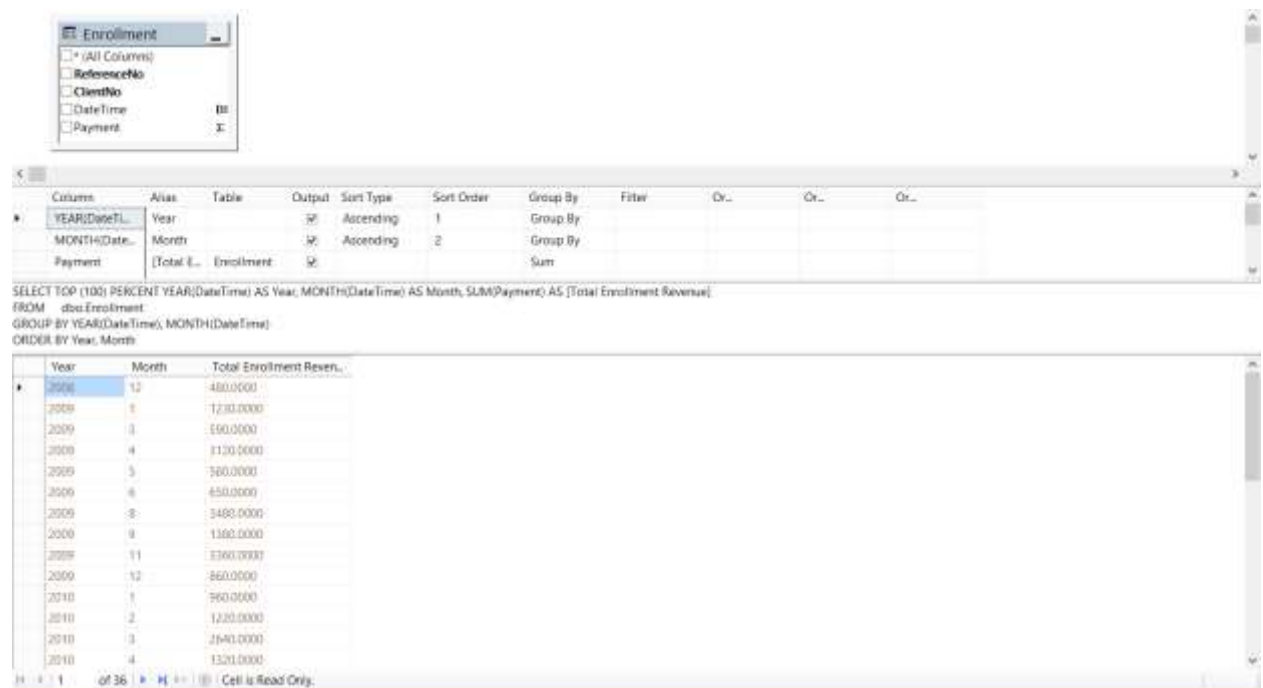

```
SELECT TOP (100) PERCENT dbo.Client.FirstName AS (Client First Name), dbo.Client.LastName AS (Client Last Name), SUM(dbo.Enrollment.Payment) AS (Total Course Payment Received)
FROM   dbo.Client INNER JOIN
      dbo.Enrollment ON dbo.Client.ClientNo = dbo.Enrollment.ClientNo
GROUP BY dbo.Client.FirstName, dbo.Client.LastName
ORDER BY (Total Course Payment Received) DESC
```

**Results:**

Client First Name	Client Last Name	Total Course Payment ...
John	Morales	1710.0000
Emma	Garcia	1520.0000
Olivia	Martinez	1490.0000
Ava	Hernandez	1430.0000
Samantha	Sims	1410.0000
Ethan	Sullivan	1410.0000

## Course Revenue per Month View

This view shows the amount of revenue collected from all courses per month. Over the years it is good to compare trends in the business with past performance to help predict the future. By knowing this information, it will be easy to analyze whether the clients prefer to take courses at a particular month. In addition, by comparing Month 3 of 2009 with month 3 of 2010 or 2011 we can see if FTI is improving their practices in a positive direction. If FTI offer the same classes during the same time of year through the proper channels, you would want the revenue to increase over time. But if the trend is negative, then the courses should be reviewed carefully by considering other factors such as trainer, fee, book used, etc. Finding these factors would not be hard because by knowing the time variable of the revenue, it would be easy to find out which courses (and its related information) were offered in a particular month and year since the class start date is recorded in the database. The courses' monthly revenue is what fuels this company and allows it to grow and be profitable. The view is sorted first by year and then by month from least recent to most recent so you can easily find the revenue from the month and year you wish to see.

The screenshot shows a database management tool interface. At the top, there is a window titled 'Enrollment' with a list of columns: (All Columns), ReferenceNo, ClientNo, DateTime, and Payment. Below this, there is a table with columns: Columns, Alias, Table, Output, Sort Type, Sort Order, Group By, Filter, Cr., Cr., Cr., Cr.. The table contains three rows: Year, Month, and Payment. The Year row is sorted by Ascending and has a Sort Order of 1. The Month row is sorted by Ascending and has a Sort Order of 2. The Payment row is sorted by Sum and has a Sort Order of 3. Below the table, there is a SQL query: 

```
SELECT TOP (100) PERCENT YEAR(DateTime) AS Year, MONTH(DateTime) AS Month, SUM(Payment) AS [Total Enrollment Revenue]
FROM dba.Enrollment
GROUP BY YEAR(DateTime), MONTH(DateTime)
ORDER BY Year, Month
```

 The query results are displayed in a table with columns: Year, Month, and Total Enrollment Revenue. The table shows revenue for each month from 2006 to 2010. The data is sorted by Year and then by Month.

Year	Month	Total Enrollment Revenue
2006	12	480.0000
2009	1	7230.0000
2009	3	190.0000
2009	4	1120.0000
2009	5	560.0000
2009	6	650.0000
2009	8	3480.0000
2009	9	1360.0000
2009	11	1360.0000
2009	12	860.0000
2010	1	960.0000
2010	2	1220.0000
2010	3	2640.0000
2010	4	1320.0000

## Top Trainer View

This view shows the trainer's name, the name of the course that the trainer taught, ReferenceNo of the class taught and number of students the class had. Since for most of the courses, at least two trainers are qualified to teach the course, it might be hard to determine which of the qualified trainers are better in critical moments. However, by looking at their teaching history (this view), it is easy to determine the better and more experienced trainer in terms of how many students they have taught for each class. This information is valuable in determining which trainers is possibly one of the most important resources of the company. Sometimes clients pick classes based on who is teaching the class, and if they enjoy the way a trainer delivers the class, they are more likely to take more classes from the same trainer even though they are not required to take the class. By comparatively looking at the trainers, classes, and their respective number of students taught in a class, it is possible to infer which of the trainers have this quality that attracts clients which in turn can increase the profitability of the business. Using this information, FTI can further compensate top trainers to keep the trainers happy and prevent possible recruitment from competitors. This view is not sorted by trainer's name, but by Course Title. That way, it is easy to compare between trainers who have taught the same courses over the years; all trainers have different qualities and may teach some courses better than the other courses even if they are qualified. The key is to be able to find out which trainers are good at teaching which courses.

The screenshot displays a database management tool interface. At the top, four database tables are visible: **Trainer**, **Class**, **Enrollment**, and **Course**. Below them, a query editor shows the following SQL query:

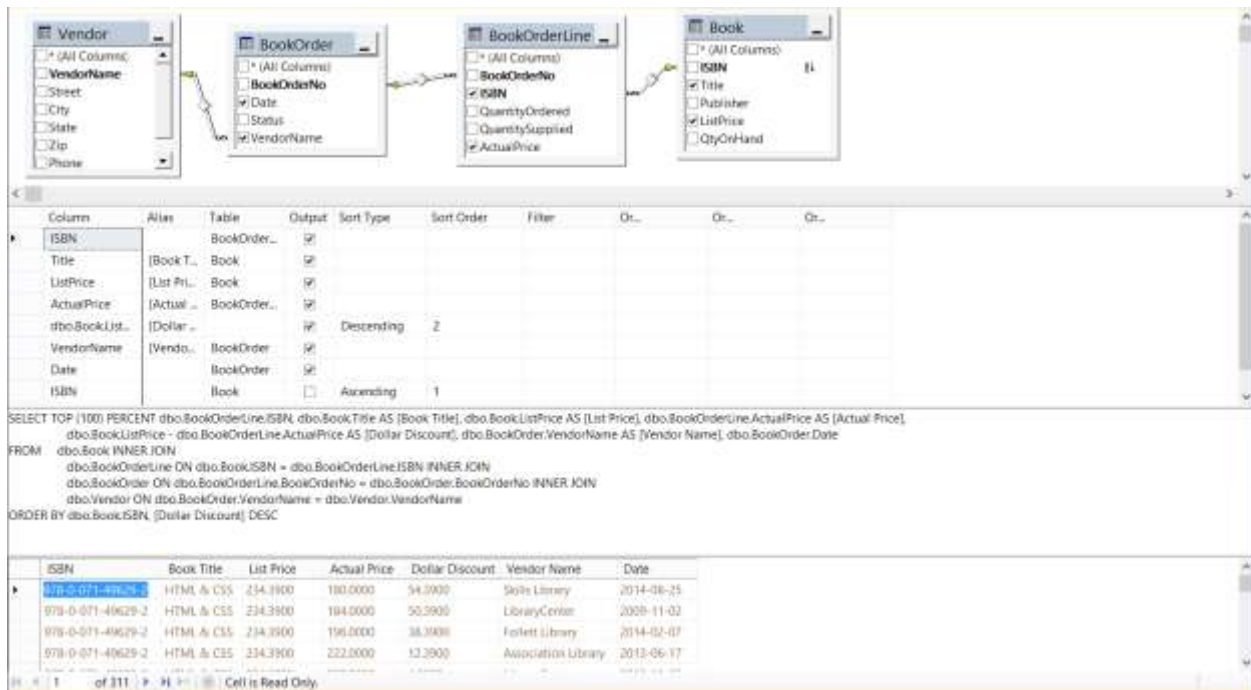

```
SELECT TOP (100) PERCENT dbo.Trainer.FirstName + ' ' + dbo.Trainer.LastName AS Trainer, dbo.Course.Name AS [Course Title], COUNT(dbo.Enrollment.ClientNo) AS [No. of Students], dbo.Class.ReferenceNo
FROM
  dbo.Trainer INNER JOIN
    dbo.Class ON dbo.Trainer.EmployeeNo = dbo.Class.EmployeeNo INNER JOIN
      dbo.Course ON dbo.Class.CourseCode = dbo.Course.CourseCode INNER JOIN
        dbo.Enrollment ON dbo.Class.ReferenceNo = dbo.Enrollment.ReferenceNo
GROUP BY dbo.Trainer.FirstName, dbo.Trainer.LastName, dbo.Course.Name, dbo.Class.ReferenceNo
```

The results grid below the query editor displays the following data:

Trainer	Course Title	No. of Students	ReferenceNo
Steve Kott	Adv Adobe ...	3	10225
Paul McCart	Adv Cyber S...	14	10307
Freddy Kru	Adv Database...	6	10001
Julia Roberts	Adv Database...	3	10348

## Top Vendor View

This view shows which book vendor gives the best price per book comparatively. ISBN, Book Title, List Price, Actual Price charged from vendor, Dollar discount (difference of List Price and Actual Price), Vendor name and the Date of the order is shown. This is an important view because when ordering multiple books we want the best price possible to save the most money. FTI will have to evaluate all vendors to see who is continuously giving the best price. For this purpose, this view is sorted by Book Title so it is easy to see which vendors offer the best price for the same books. Monitoring these differences can help make the company lower its expenses. Some numbers in the Dollar Discount may appear as negative numbers; this is due to the fact that some book prices are being raised more than the original List Price. If there is a trend of negative dollar discount, FTI might have to consider buying other books titles. It may also be beneficial that FTI establish an exclusive relationship with a vendor so better deals might be offered by providing more business to vendors. It is in FTI's best interest to establish this exclusive relationship with vendors that are already offering low prices. FTI should choose its vendors wisely and can do so by first reviewing this view.

Column Alias Table Output Sort Type Sort Order Filter Or... Or... Or...

This report shows what books were not delivered by which vendor. Even though a vendor can offer great book prices, it still is not worth it if the vendor distribution services are poor. In case of time sensitive seasons, purchases should be made from reliable vendors who can guarantee to deliver the books in a timely manner. Nevertheless, it is important to point out that some vendors might specialize in selling a particular group of book titles. For a vendor who often runs out of stock for one book might always have other in-stock books needed by FTI that never runs out. Similarly, a reliable vendor for one book does not imply that it is reliable for all book titles. This is why this report not only shows the Vendor Name and the total number of the books that were undelivered, but also shows the specific book titles that were not available. This report is particular useful for the Purchase Department who is in charge of ordering books. Before making a book order, it is recommended to take a look at this report for further consideration.

# Class Enrollment Report

04/16/2015

Course Name	Client First Name	Client Last Name	Enrollment Date	Payment	Trainer Last Name	Trainer First Name
<b>Adv Adobe Photoshop</b>				<b>\$1,050.00</b>		
	Jack	Barnes	10/18/2011	\$350.00	Steve	Jobs
	Olivia	Martinez	10/18/2011	\$350.00	Steve	Jobs
	Sophia	Smith	08/18/2011	\$350.00	Steve	Jobs
<b>Adv Cyber Security</b>				<b>\$3,480.00</b>		
	Adrian	Banks	08/18/2009	\$300.00	Paul	McCartney
	Mia	Brown	08/18/2009	\$300.00	Paul	McCartney
	Sarah	Cole	08/18/2009	\$210.00	Paul	McCartney
	Reagan	Dean	08/18/2009	\$210.00	Paul	McCartney
	Gavin	Fuller	08/18/2009	\$300.00	Paul	McCartney
	Jhon	Greene	08/18/2009	\$210.00	Paul	McCartney
	Chloe	Miller	08/18/2009	\$300.00	Paul	McCartney
	Aiden	Morales	08/18/2009	\$210.00	Paul	McCartney
	Jackson	Powell	08/18/2009	\$300.00	Paul	McCartney
	Liam	Russell	08/18/2009	\$210.00	Paul	McCartney

This report is designed to provide a snapshot overview of all courses that have been offered, the clients that have enrolled in it, the enrollment date, the payment amount and the trainer that taught the course. This report is sectioned in alphabetical order by course name and sorted by client last name. Also displayed is the total revenue received from all courses. By looking at the subtotals of each course payment in this class enrollment report, FTI can see which classes are bringing the most revenue and attracting the most clientele. This class enrollment report will help FTI better understand what class offerings are important among the clientele by looking at the number of clients enrolled at a particular course. With this information, FTI can determine if it should add classes, cut classes, or bring back successful classes that have not been offered in a while. Nevertheless, this report complements the Course Revenue per Month view. If the CFO want to know why a particular month revenue increased, he/she could look at this report and easily see which are the sources of income by looking at the enrollment date. In addition, this report can also serve as a complement to the Top Client View. If there was a particular group of clients who always spends the most at FTI, information about whether these same clients were taking the same courses with the same trainer can easily be found in this report; it would also explain why a particular course always brings the company great amount revenue.

For a full length of this report, please go to page 56.

# Shipped Book Cost Report

04/16/2015

Title	Books Ordered	Books Shipped	Shipped Book Cost
<b>Beginning Microsoft Word</b>	<b>45</b>	<b>45</b>	<b>\$8,404.00</b>
	3	3	\$540.00
	3	3	\$600.00
	4	4	\$700.00
	4	4	\$720.00
	4	4	\$752.00
	4	4	\$952.00
	5	5	\$900.00
	6	6	\$1,050.00
	6	6	\$1,080.00
	6	6	\$1,110.00
<b>Business Intelligence</b>	<b>31</b>	<b>31</b>	<b>\$4,074.00</b>
	3	3	\$297.00
	3	3	\$300.00
	3	3	\$450.00
	3	3	\$600.00
	4	4	\$412.00

This report is designed to display all of the books that have been ordered since company inception. Included in the report is the book title, the amount books that were ordered and shipped as well as the costs for the shipped books. This report is sorted in descending order by book title. This report allows employees to keep track of what books are accounted for. To make sure that there are no dishonesty in the purchasing and inventory department, this report shows the exact number of books that were shipped and the costs for each order. That way, if some books were not shipped, there is no way that the employees can try to use the refund money for personal purposes. In addition, by knowing the number of books shipped, FTI can also compare whether the quantity of books on hand make sense and also anticipate a future need. Orders can come from different vendors and the company pays different prices for the same book due to discounts. The report can allow us to see the average cost per book. For example, we can see that for the book "Beginning Microsoft Word", there have been 45 books ordered at a cost of \$8404.00, that is an average of \$188 per book. Some orders had cost as low as \$175 or as high as \$238 per book in one order. This information will help in accounting for future price requirements of the book for future book orders. Finally, the total book expenses for each book can be compared with the total course revenue for each corresponding course.

For a full length of the report, please go to page 43.

# Client Last Enrollment Report

04/17/2015

Year	Client Name	Last Enrollment Date	Phone
<b>2011</b>			<b>No. of Clients: 1</b>
	Jayden Butler	12/18/2011	(813) 265-0111

	Isla Warner	07/06/2013	(813) 559-1305
	Mason Ortiz	07/06/2013	(813) 717-3877
	Gabriel Oliver	07/06/2013	(813) 697-8000
	Aaliyah Hayes	07/06/2013	(813) 994-8227
	Sadie Sandoval	07/06/2013	(813) 719-1001
	Lucas Gutierrez	07/06/2013	(813) 392-1365
	Grace Wallace	07/06/2013	(813) 392-3008
	Jack Barnes	07/06/2013	(813) 392-1261
	Nathan McCoy	12/18/2013	(813) 375-2434
	Samantha Sims	12/18/2013	(813) 639-1106
	Ethan Sullivan	12/18/2013	(813) 717-3181
	Quinn Haynes	12/18/2013	(813) 413-6850

This report is sectioned by year for your convenience and shows the last date a client enrolled in a class with their respective contact information. With this report, the company can identify and call clients who have not enrolled within a period of time and possibly advertise new classes that have been added since they last enrolled (refresher courses, courses to continue where they left off in a particular track). Using this information, FTI can regain lost clientele and turn them into repeat customers. In addition, this report might provide insights to why some clients stopped taking classes. These clients might have experienced bad service in their last enrollment class and possible causes (such as trainer, classmates, book, etc) are easy to be investigated by knowing the enrollment date. Another idea would be to reach out to suitable candidates (clients who have stopped enrolling recently rather than for a long time) as alumni and find out what they are up to and ask what they liked or didn't like about FTI.

For a full length of the report, please go to page 41.

# Client Purchase Behavior Report

04/18/2015

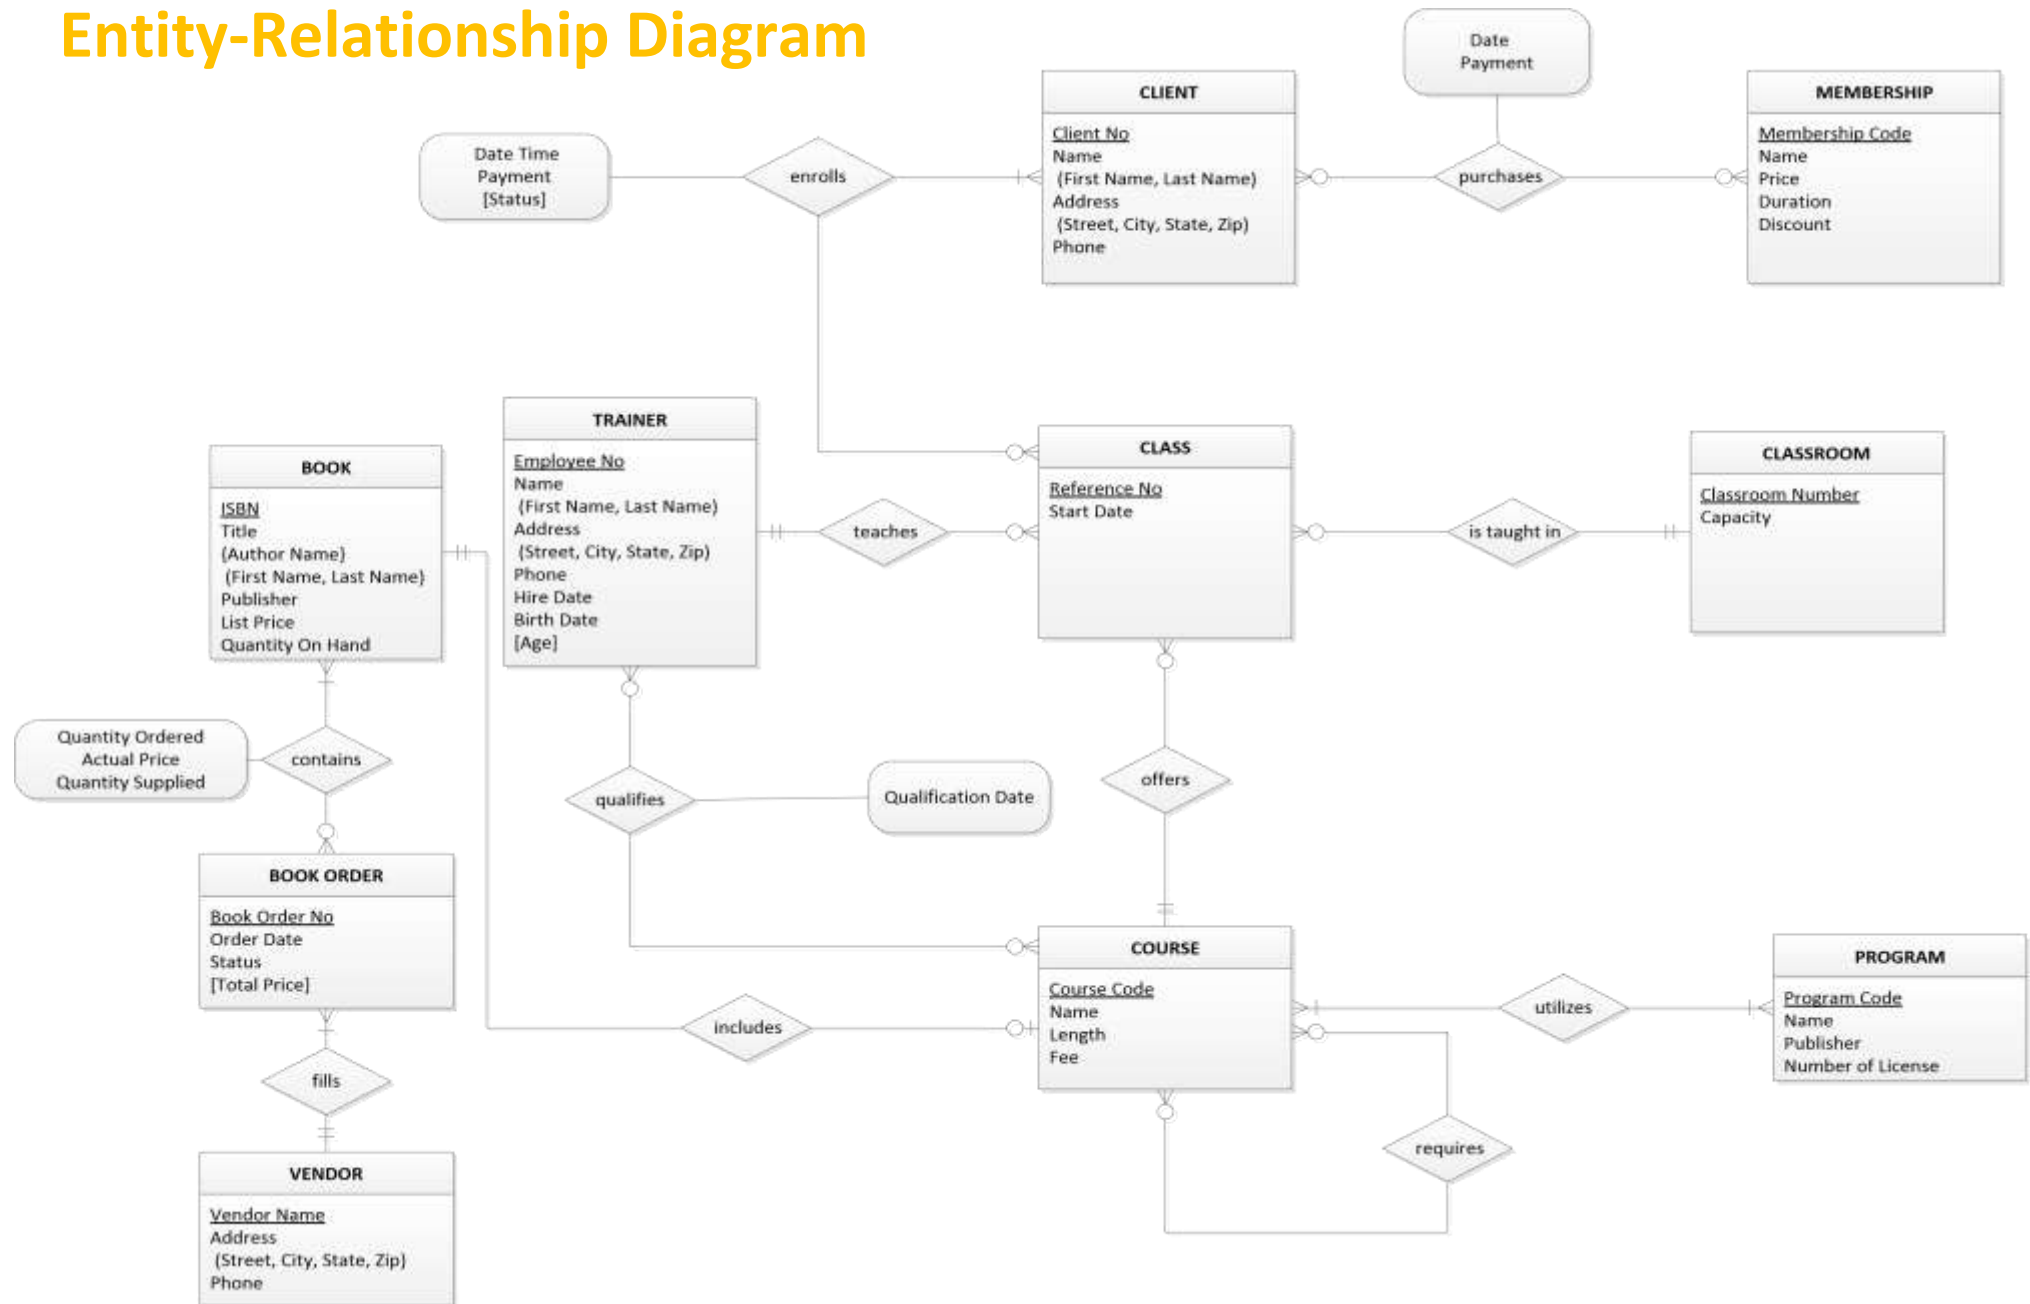

Total Payment	Client Name	No of Membership Purchases	Total Membership Payment	No of Enrollment Purchases	Total Enrollment Payment
\$2,990.00					
	Olivia Martinez	12	\$1,500.00	9	\$1,490.00
\$2,520.00					
	Emma Garcia	8	\$1,000.00	9	\$1,520.00
\$2,510.00					
	Aiden Morales	4	\$800.00	9	\$1,710.00
\$2,440.00					
	Chloe Miller	6	\$1,200.00	8	\$1,240.00
\$2,245.00					
	Sadie Sandoval	9	\$1,125.00	7	\$1,120.00
\$2,225.00					
	Jack Barnes	7	\$875.00	8	\$1,350.00
\$2,120.00					
	Zoe Thompson	4	\$800.00	10	\$1,320.00
\$2,065.00					
	Sarah Cole	7	\$875.00	6	\$1,190.00
\$1,850.00					
	Aaliyah Hayes	5	\$1,000.00	6	\$850.00

This report gives us the total amount (in count and in monetary value) each client spent on membership and enrollment. Total Payment gives the combined total of those two factors. The report is sorted by the Total Payment (from most amount to least) so it can be easier to compare the behavior of clients who have similar amounts of spending. Did they buy more membership or did they simply enroll in more classes? Where exactly is the source of FTI's income? With this information, FTI can know the differences between clients that spend more than average and clients that spend less than average. By knowing the differences, the marketing department can adjust their target market strategy accordingly (advertize new class offerings to clients that have spent more money in class enrollments or further communicate membership benefits to clients who have bought membership many times). In addition, FTI can better understand the clientele, "How many memberships are purchased in relation to enrollments?" Perhaps the clients are buying more membership than their class enrollments which is not convenient for the clients and new membership types (with longer period) should be considered. By understanding the clientele we can better service their needs and wants and be the company that they will proudly recommend to others.

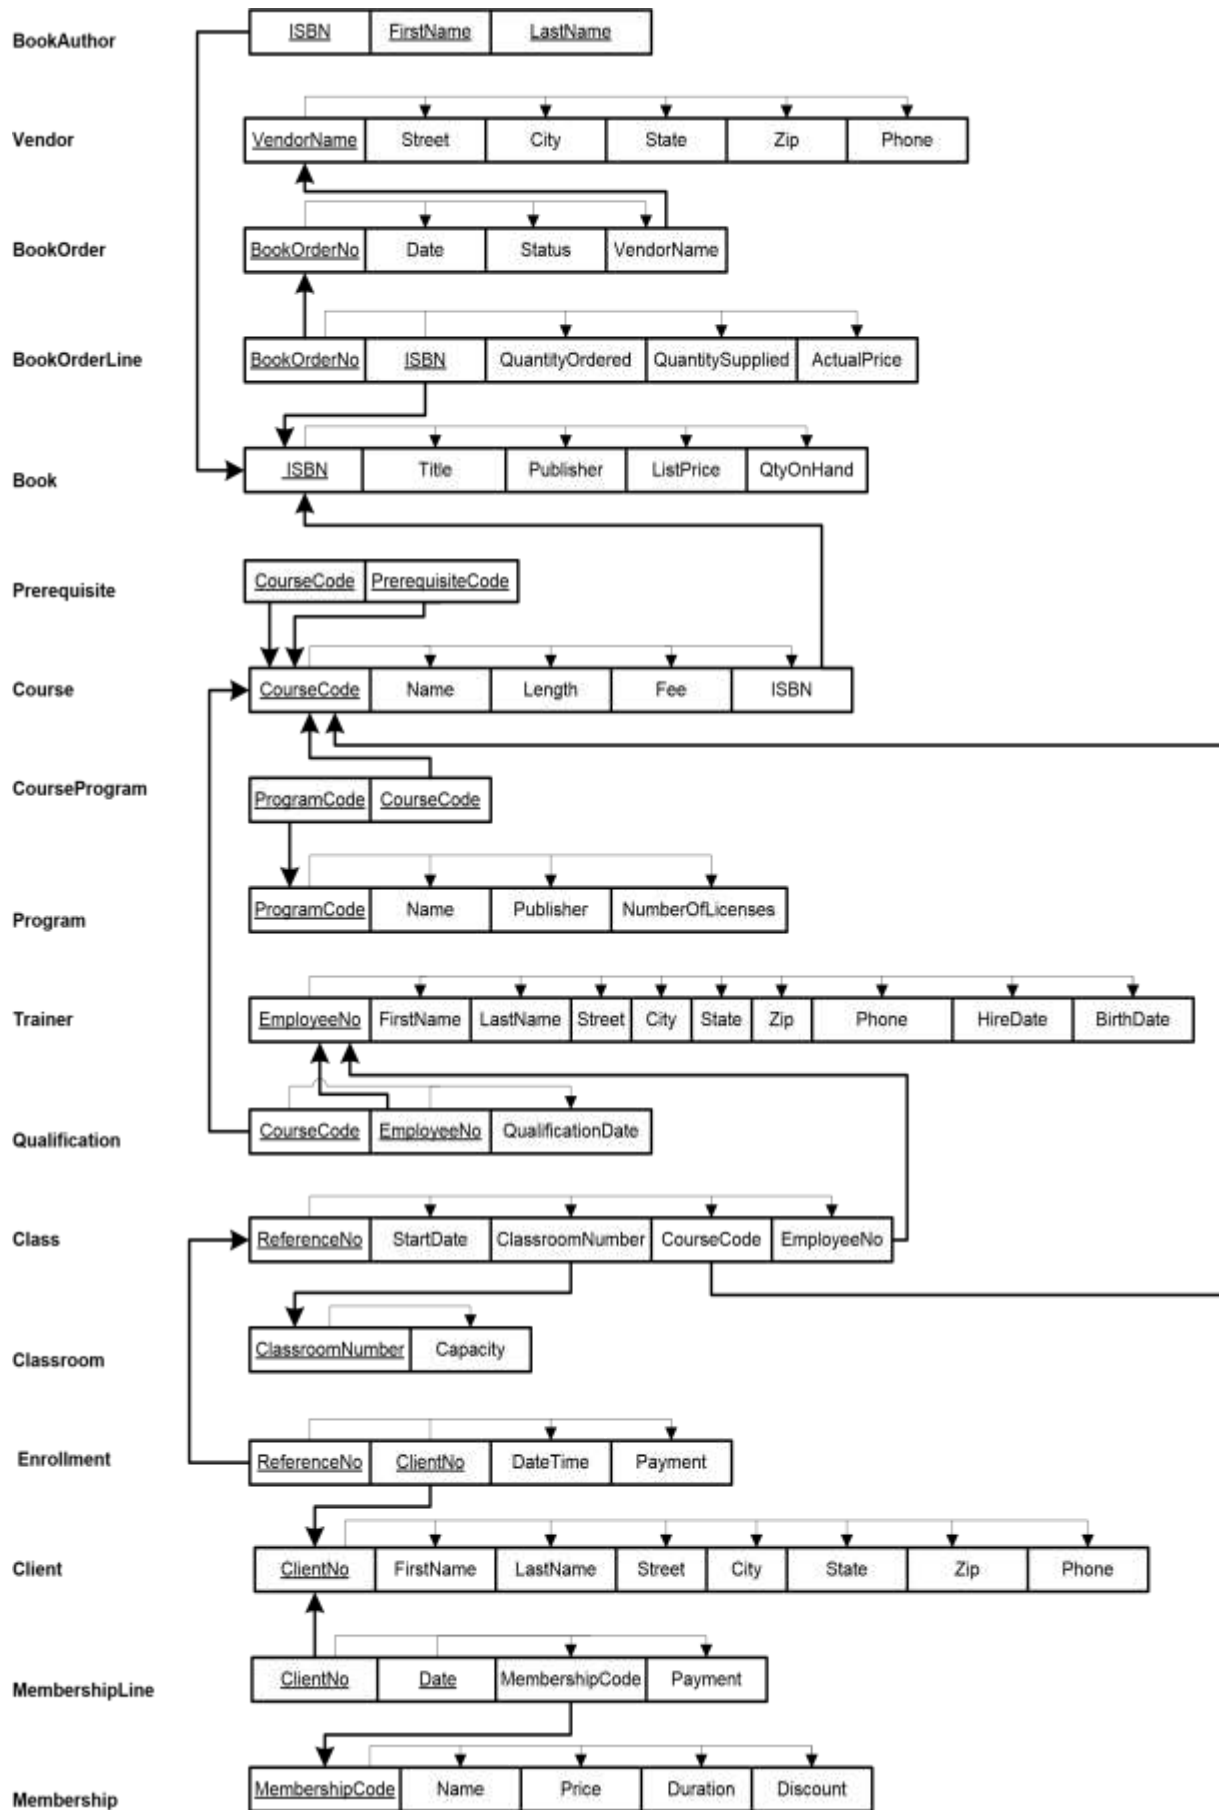

For a full length of the report, please go to page 53.
